CLAP LIGHT

01

What you will need:

Calliope mini

Batteries

Template

Tape

Tracing paper

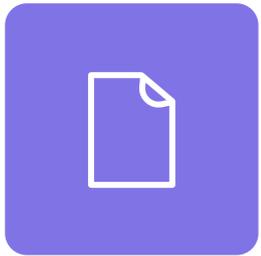

2 Rubber bands

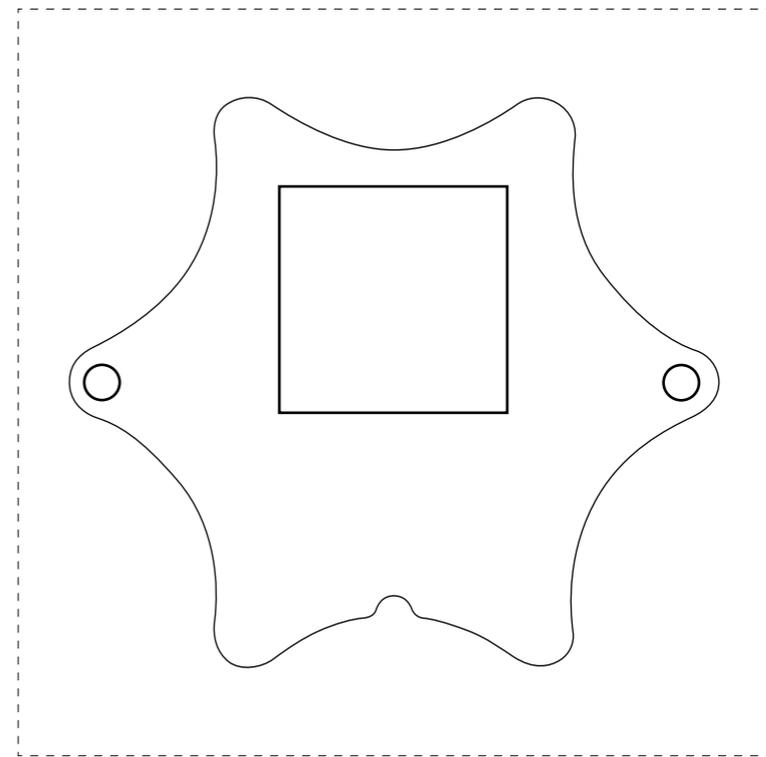

Scissors

mini box

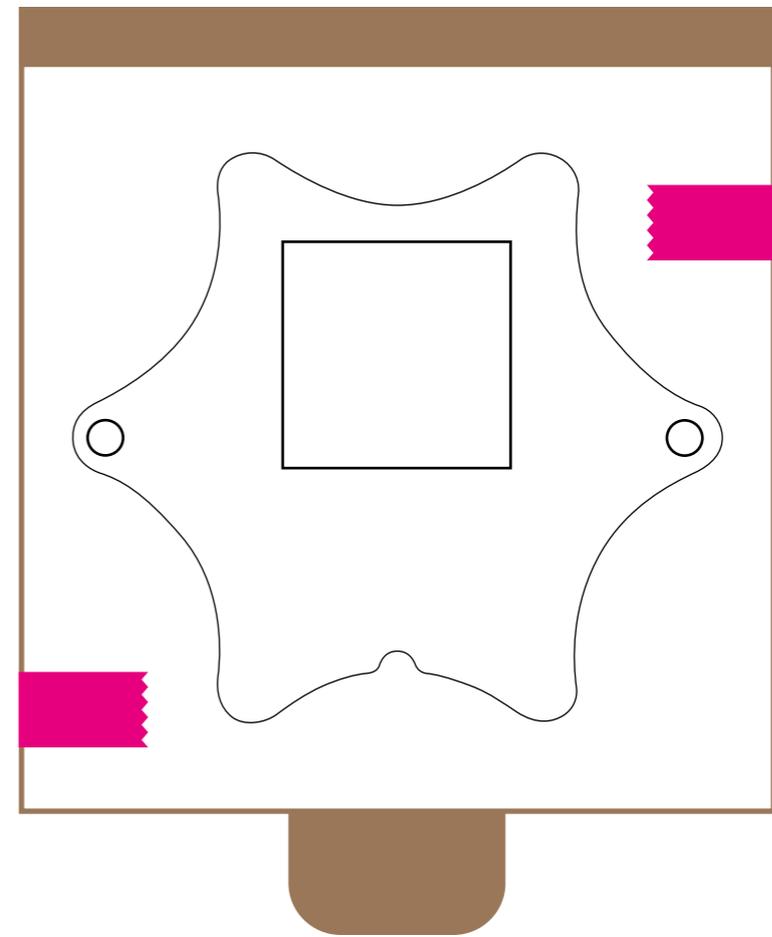

Cut the template.

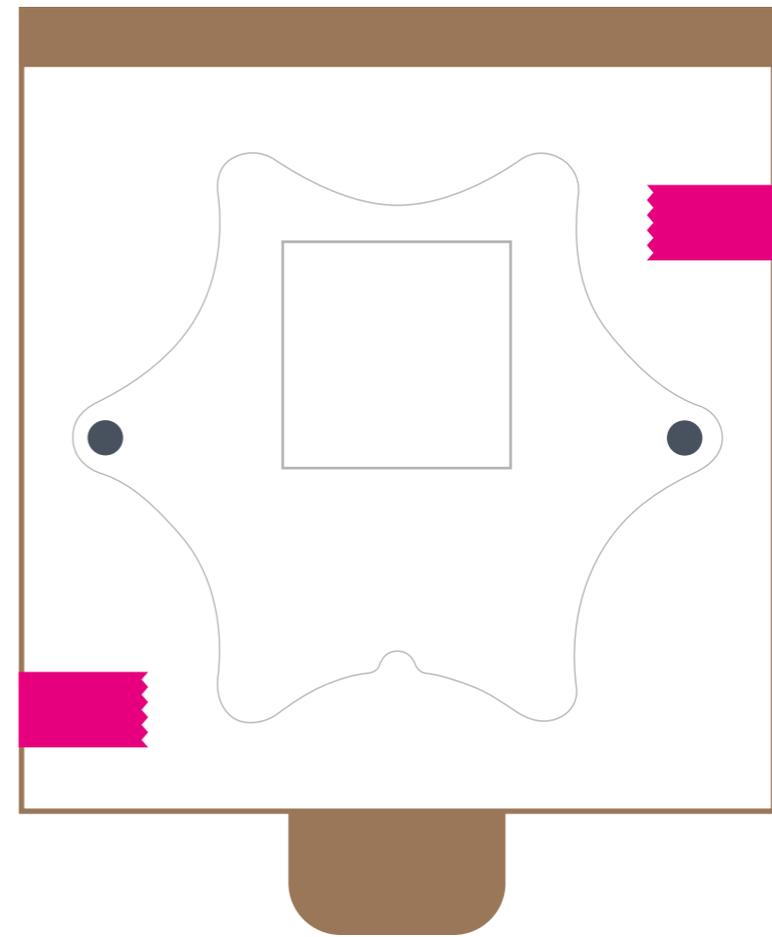

Stick the cut out template with sticky tape onto the mini box.

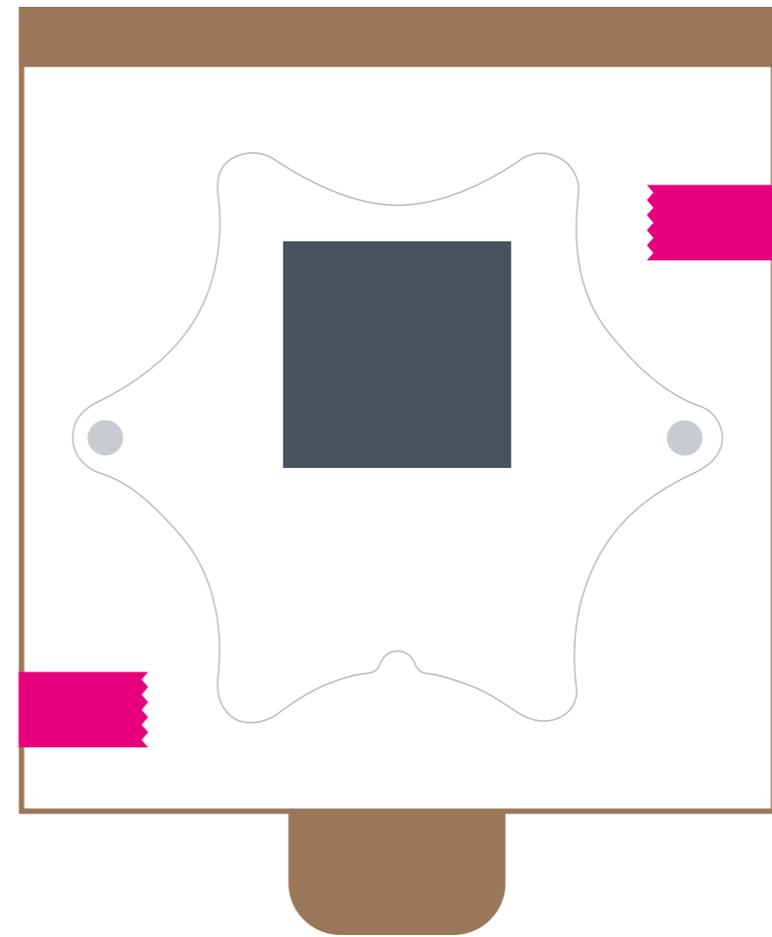

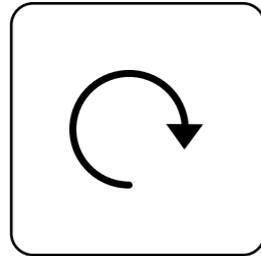

Use a pair of scissors to carefully pierce five holes in the marked pins on your template. The cardboard must also be perforated.

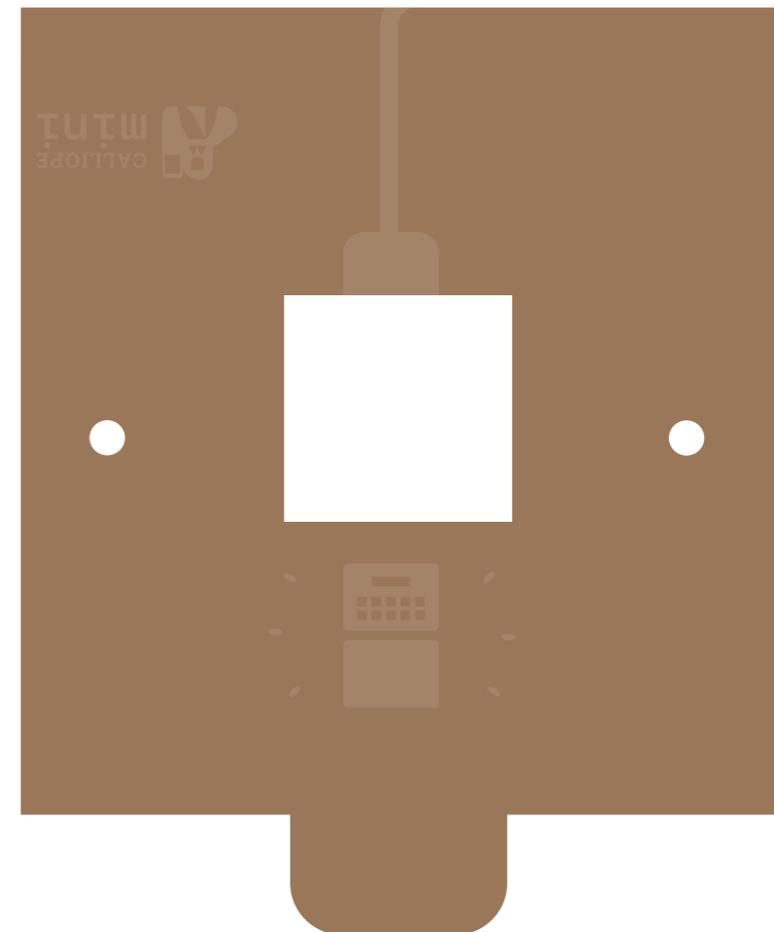

Now cut the window for the display and the speaker. Again, you have to cut through the craft template and the box.

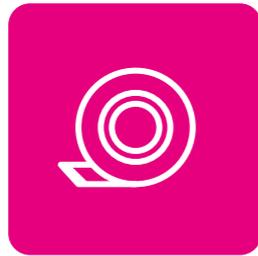

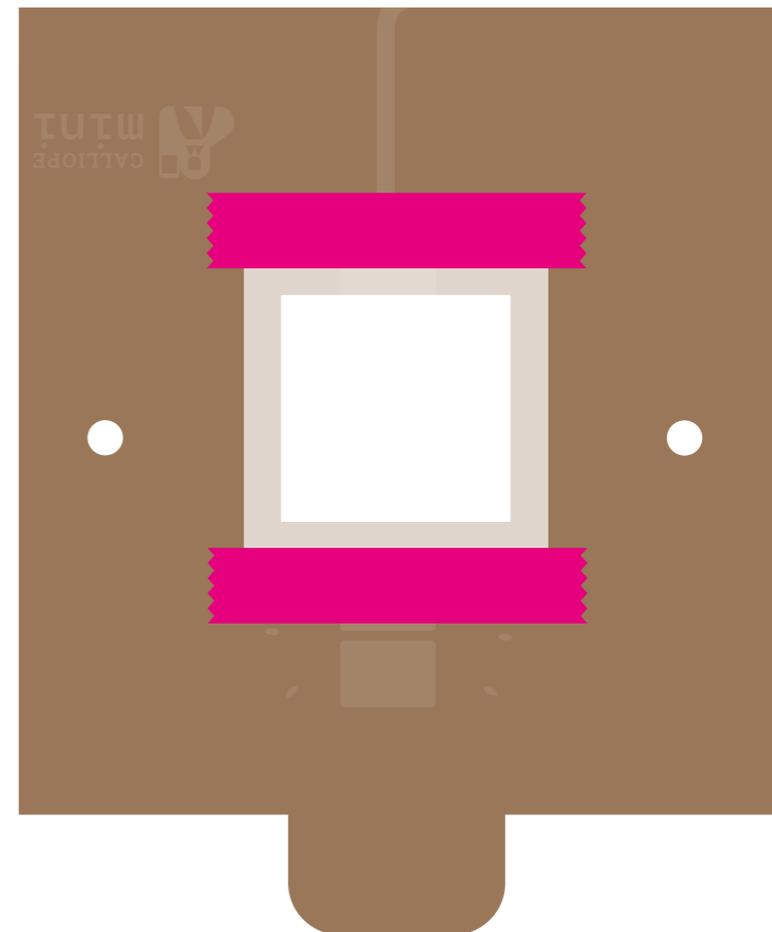

Remove the template.

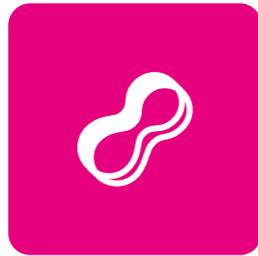

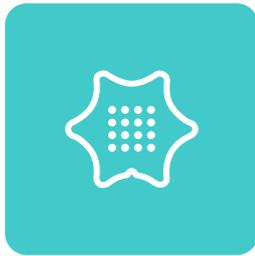

Then turn the box over so that you look at the back of the lid of the mini box.

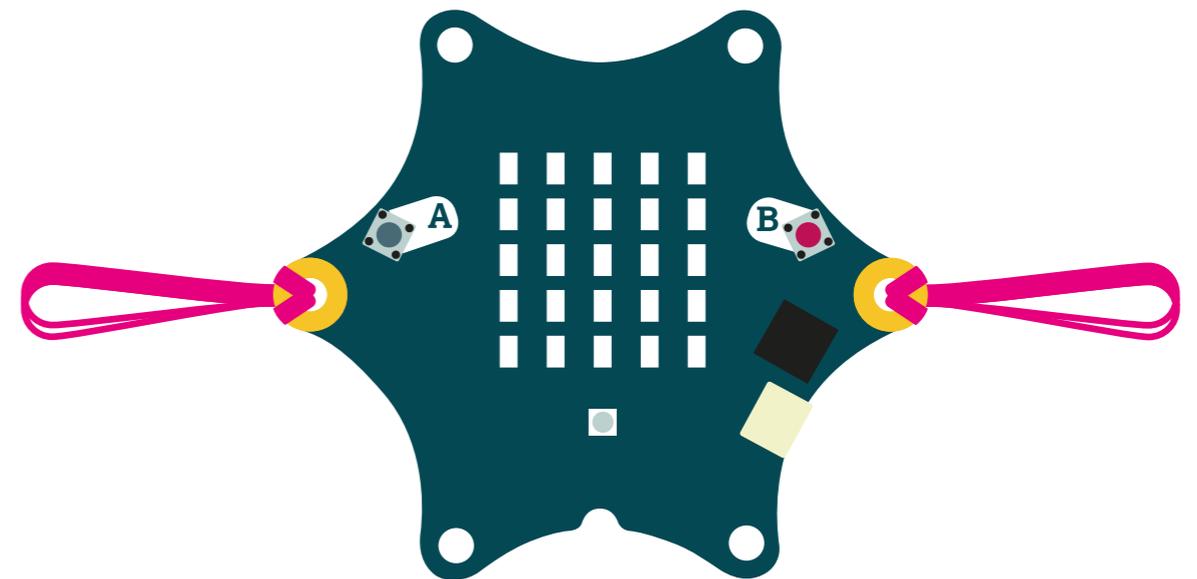

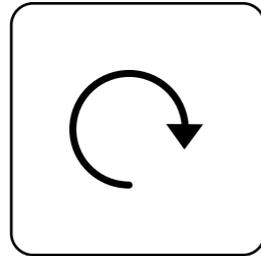

Stick a piece of tracing paper over the middle window.
Use the sticky tape.

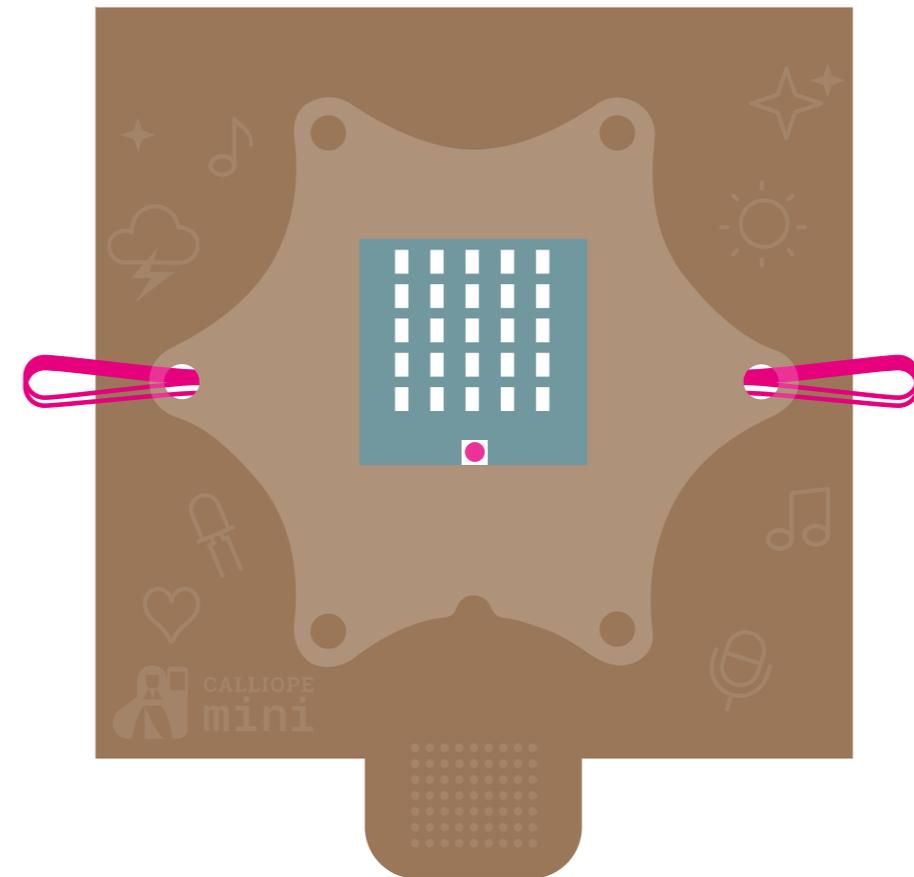

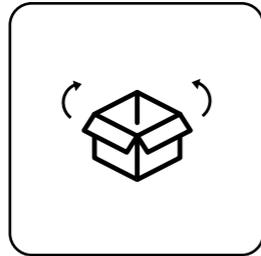

Attach one rubber band each to Pin 0 and Pin 3 of your Calliope mini.

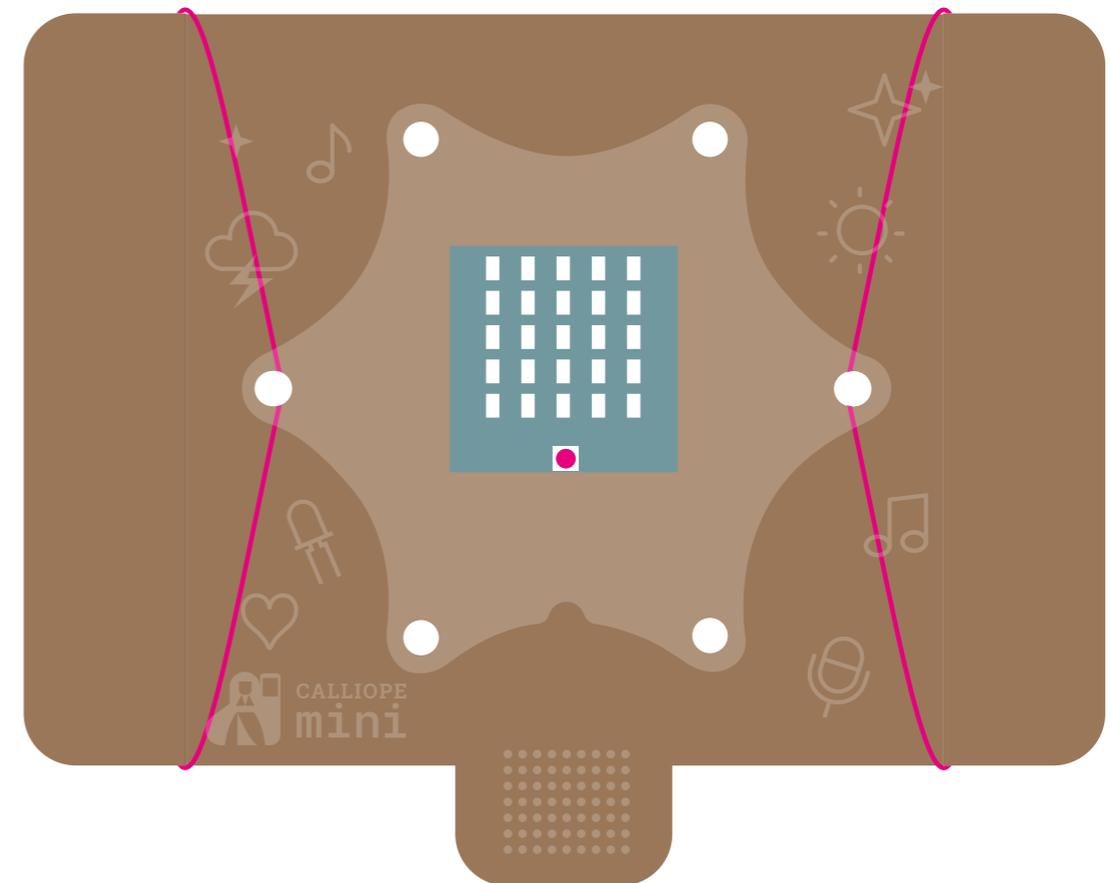

Place your Calliope mini in the mini box and insert the rubber bands through the holes on the side of the lid. You can now see the display through the cut-out window.

Finally, connect the battery compartment to your Calliope mini, place the battery compartment in the mini box and fold it shut.

Attach the rubber bands on the outside to the flaps of the mini box that are folded outwards.
